

Stephen Weaver

Software Developer | Business Systems Developer | Automation & AI Integration

stephen@stepweaver.dev | stepweaver.dev | Granger, IN

PROFESSIONAL SUMMARY

Product-minded software developer and systems builder with 9+ years across development, business analysis, data, and operations. Repeatedly enters unfamiliar domains and tools, learns what the work requires, and ships working applications, automation, and integrations. Builds full-stack and AI-assisted systems with TypeScript, JavaScript, Python, SQL, and modern web platforms. Communicates across technical and nontechnical teams, translating business requirements into operable software.

SKILLS

Languages & frameworks: JavaScript, TypeScript, Python, SQL, React, Next.js, Node.js, Tailwind CSS

Databases & tooling: PostgreSQL, Supabase (Auth & Realtime), Neon, MongoDB

DevOps & cloud: Vercel, AWS, Git/GitHub, CI/CD pipelines, Docker, Netlify

Automation & AI: LLM integrations (OpenAI/Groq), Prompt engineering, Resend, n8n, Zapier, Auth.js, Stripe

Data & reporting: Tableau, SQL analytics, Excel, Data storytelling

Business analysis: Requirements gathering, Agile/Scrum, UAT, Documentation, Stakeholder collaboration

Currently building: SvelteKit · Svelte 5 · TypeScript · Cloudflare · D1 · Drizzle

Rebuilding `λstepweaver` from Next.js in SvelteKit as an instructional lab: routing, loading, component boundaries, TypeScript data modeling, then Cloudflare, D1, and Drizzle. Not a mechanical framework port.

PROFESSIONAL EXPERIENCE

λstepweaver — Founder & Developer

Nov 2024 – Present

- Designed and launched a real-time silent-auction platform for a school fundraiser using Next.js and Supabase Realtime; delivered guided bidder onboarding, alias-bidding, realtime updates, donor portals, and admin workflows; hardened trust boundaries and server-side rule enforcement.
- Built a cash-flow planning app with Next.js, Neon Postgres, Drizzle ORM, and Auth.js; implemented paycheck-window UX and a status pipeline (scheduled → pending → paid) with month templates to reduce cash flow surprises and provide reusable budgeting patterns.
- Developed `λlambda`, an LLM chat agent integrated into the portfolio and terminal; built server-only prompts, model routing between Groq and OpenAI, multimodal support, and terminal command interface; implemented prompt-injection filtering and provider fallback.
- Delivered custom automation systems for small-business clients including lead capture, operational dashboards, and AI scheduling tools; leveraged n8n/Zapier, Python, and Google APIs to eliminate manual steps and improve data visibility.
- Managed delivery from scoping and UX through deployment; configured environment-based deployments and iterated on feedback with clients.

University of Notre Dame — Business Analyst

Nov 2017 – May 2025

- Managed SQL data pipelines and Tableau dashboards supporting campus meal-plan operations for thousands of students; automated monthly reporting and reduced manual reconciliation time.

- Administered the CSGold ID transaction system handling thousands of transactions per day; coordinated third-party integrations and implemented authentication updates.
- Automated procurement and meal-plan workflows using Python, SQL, and Excel macros, saving significant staff time.
- Led cross-functional user-acceptance testing for new modules: gathered requirements, translated between stakeholders and developers, and ensured smooth rollouts.

University of Notre Dame — Operations Manager

Aug 2014 – Nov 2017

- Oversaw logistics, labor scheduling, and inventory management for high-volume campus dining operations; implemented metrics-driven performance management to optimize costs and throughput.
- Managed daily operations across multiple dining halls; improved customer service and supported quality assurance programs.

U.S. Air Force — Cryptologic Linguist

Aug 2003 – Aug 2007

- Translated and analyzed high-stakes foreign signal intelligence; produced mission-critical reports with high accuracy under tight deadlines.
- Built early expertise in pattern recognition, structured reporting, and mission-driven analysis that underpins current technical problem solving.

SELECTED PROJECTS

Silent Auction Platform: Real-time auction system for a school PTO fundraiser; built with Next.js, Supabase, and Resend; includes alias-based bidding, realtime updates, donor portals, and admin dashboards.

Bill Planner: Cash-flow planning app built with Next.js, Neon, and Drizzle ORM; supports mapping income to bills, status pipeline, HUD metrics, and reusable month templates.

Alambda LLM Chat Agent: Portfolio-native LLM advocate with Groq/OpenAI routing, channel-aware chat across website and terminal, prompt-injection filtering, and provider fallback strategies.

EDUCATION

- B.A. Communication Studies, Grand Valley State University
- A.A. Business Administration, Ivy Tech Community College
- Certificate, Intensive Spanish Language Program, Defense Language Institute Foreign Language Center (DLI)
